For set-up, transaction, and equipment pricing contact a VeriCheck reseller or call 866-VERICHECK

VeriCheck's check scanning solutions empower merchants to safely and securely accept check payments from customers.

Remote Deposit Capture enables merchants to deposit checks directly from their place of business.

Your organization saves money by reducing trips to the bank, and also enjoys the added benefit of VeriCheck's instant check verification.

Simply scan your check through the Excella™ bulk scanner with VeriCheck's free check scanning software.

The check scanner automatically inputs the account, routing, and check numbers.

The merchant inputs the customer's name, the check amount, and other optional information, hits submit - and gets instant notification if there are any problems with the check writer or the account!

Once the check is verified, it is submitted to be processed and funds are generally available in your bank account by the 3rd business day!

Includes ability to resubmit NSF transactions without additional customer approval
